Indicator Range for Positive Indicators

0.0 – 24.9%

25.0 – 49.9%

50.0 – 74.9%

75.0 – 95.0%

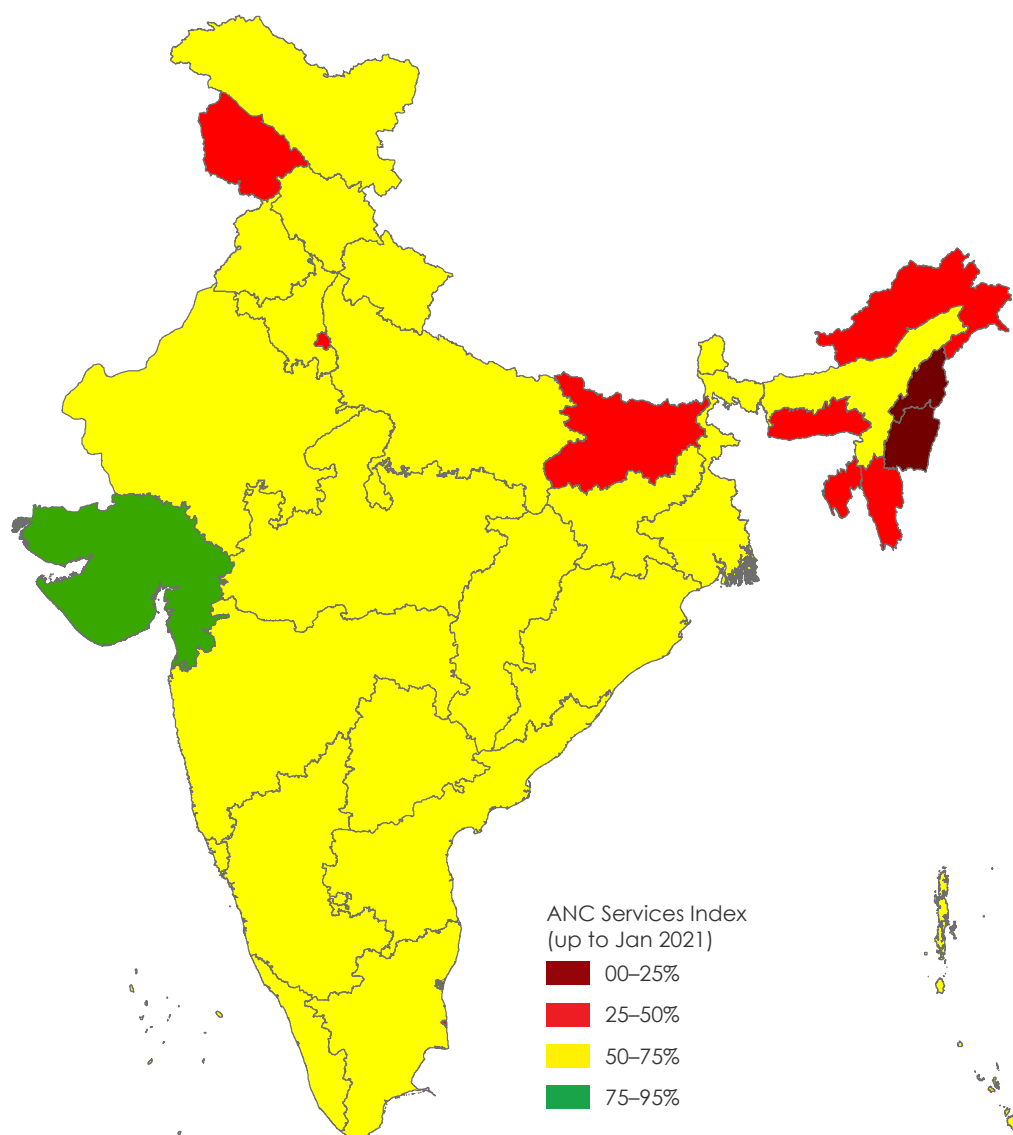

1. ANC Services Index: The index is calculated as the simple mean of five selected coverage key performance indicators.

2. Numerators & Denominators are from HMIS Standard Report 2020-21 (up to January 2021).

3. States/UTs are ranked based on the Maternal Nutrition ANC Services Index with State/UT having highest index value ranked first and so on.

* 95 % is considered as the ceiling value for HMIS coverage for States/UTs.

About ANC Services Score Card

In India, despite of substantial reduction in MMR (22% decline in maternal mortality ratio (MMR), from 167 (2011-2013) to 130 (2014-2016) deaths per 100,000 live births), progress on maternal malnutrition and its related adversities has been slow. The WHO has placed substantial emphasis on nutrition assessment and provision of a set of nutrition interventions including provision of balanced energy protein supplementation, iron folic acid (IFA), and calcium supplementation, deworming, gestational weight gain monitoring and counselling on nutrition, family planning and breastfeeding coupled with efforts to prevent and treat maternal infections and anemia.

The ANC Services Score Card is developed with an objective to provide information on coverage of services related to maternal nutrition during antenatal care, to support assessment of progress and performance of the maternal nutrition interventions. These include IFA, calcium, albendazole after first trimester and JSSK diet during delivery stay. The Score Card is based on data from Health Management Information System (HMIS). State/UT are ranked in descending order of the mean coverage whereby State/UT with best performance is ranked first.

This scorecard is prepared by Institute of Economic Growth (IEG) in collaboration with UNICEF.
